

Carbon Reduction Plan

Supplier name: **Bouygues Travaux Publics**

Publication date: **12th May 2026**

Commitment to achieving Net Zero

Bouygues Travaux Publics UK Branch is committed to achieving Net Zero emissions by 2050.

Commitment to achieving reduction target(s)

The Science Based Targets initiative has validated that the corporate greenhouse gas emissions reduction target(s) submitted by Bouygues Construction have been deemed to be in conformance with the SBTi Criteria and Recommendations (version 4.2). The SBTi has classified Bouygues Construction's scope 1 and 2 target ambition and has determined that it is in line with a 1.5°C trajectory.

As part of this commitment, Bouygues Travaux Publics commits to reduce absolute scope 1 and 2 GHG emissions 40% by FY2030 from a FY2021 base year.

Bouygues Travaux Publics also commits to reduce absolute scope 3 upstream GHG emissions 20% - covering purchased goods and services, capital goods, fuel and energy related activities, upstream transportation and distribution, waste generated in operations, business travel and employee commuting - within the same timeframe.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2021 - Bouygues Travaux Publics		
EMISSIONS	TOTAL (ktCO ₂ e)	
Scope 1	95	37 637 037 L of fuel
Scope 2	37	94 102 898 kwh
Scope 3 upstream	417	
Total Emissions	549	

Current Emissions Reporting

Reporting Year: 2025 - Bouygues Travaux Publics		
EMISSIONS	TOTAL (ktCO ₂ e)	
Scope 1	49	19 835 981 L of fuel
Scope 2	5	59 887 731 kWh
Scope 3 upstream	300	
Total Emissions	354	

Target Emissions

In order to continue our progress to achieving SBTi target, we have adopted the following carbon reduction targets in absolute value.

2030 - Bouygues Travaux Publics	
EMISSIONS	TOTAL (ktCO ₂ e)
Scope 1 & 2	79
Scope 3 upstream	334
Total Emissions	413

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects have been completed or implemented since the 2021 baseline. The carbon emission reduction achieved by these schemes in 2025 vs 2021 equate to 195 tCO_{2e}, a 35% de reduction against the 2021 baseline and the measures will be in effect when performing the contract.

The actions undertaken encompass:

- Proposing pioneering low carbon technologies within our portfolio, including electric, hybrid, and hydrogen-powered equipment.
- Prioritizing the use of low emission HVO fuel to the fullest extent possible across our projects.
- Focusing on waste reduction in accordance with the waste hierarchy (prevention, reduction, reuse, recycling, recovery, disposal).
- Procuring Renewable Energy Guarantees of Origin (REGOs) for major projects.
- Procuring recycled rebars sourced from electric arc furnaces with low emission factors.
- Enhancing, whenever technically feasible, the composition of the concrete mix employed to curtail the emission factor.
- Reduce as much as possible quantities during design studies (i.e., before construction phase).
- Establishing an internal "Carbon Management cycle" that mirrors our internal "Financial Management cycle," but tailored specifically to carbon emissions forecasting. Yearly targets are established for each project, and biannual evaluations are conducted by top management. The year-end bonuses of operational managers are partially linked to the attainment of designated carbon emission reduction targets.
- Scope 1&2 and Scope 3: Carbon emission reduction targets validated by SBTi in December 2023, to be achieved by 2030
- Bouygues Travaux Publics holds ISO 14001 certification.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standards for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting².

Scope 1 and Scope 2 emissions have been reported in accordance with CSRD European requirements (equivalent SECR requirements), and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard³.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:

Frédéric GILLES
